Sex Trafficking and Human Rights

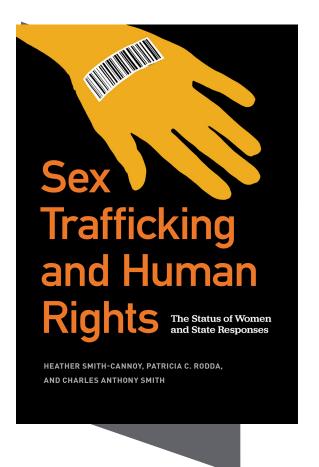

The Status of Women and State Responses

Heather Smith-Cannoy, Patricia C. Rodda, and Charles Anthony Smith

Human trafficking for the sex trade ensnares thousands of victims each year around the globe. While the international community has developed an impressive edifice of human rights law, these laws are not equally recognized or enforced by all countries. Sex Trafficking and Human Rights demonstrates how state responsiveness to human trafficking is shaped by the political, social, cultural, and economic rights afforded women.

While combatting human trafficking is a multi-scalar problem, the authors show that a common theme in the effectiveness of state response is the degree to which women and girls are perceived as, and actually are, full citizens. By analyzing human trafficking cases in India, Thailand, Russia, Nigeria, and Brazil, they shed light on the factors that make women and girls more susceptible to traffickers. Representative stories of victims give readers a sense about how victimization unfolds.

These case studies also examine how empowering women in the legislative process transforms how human trafficking cases are handled. The more female legislators and advocates are involved, the more likely anti-trafficking legislation is to prioritize a victim-based approach rather than a criminal justice approach. If the international community and state governments are to effectively combat human trafficking, they must center the equality of women in national policy.

Heather Smith-Cannoy is an associate professor of political science at Arizona State University, where she directs the Global Human Rights Hub. Patricia C. Rodda is an assistant professor of International Relations at Carroll University in Waukesha, Wisconsin. Charles Anthony Smith is a professor in political science and law at the University of California-Irvine.

Al-Qata'i:

Ibn Tulun's City Without Walls

Reem Bassiouney

Reem Bassiouney's masterful multigenerational epic tells the story of visionary leader Ahmad Ibn Tulun as he lays Cairo's foundations and transforms it into a thriving, multicultural empire with Al-Qata'i and its iconic mosque at the center.

When the Abbasid caliphate appoints Turkish army officer Ibn Tulun governor of Cairo, despotic tax collector Ibn al-Mudabbir controls Egypt. With the help of Anas, a revengeful son, and Said, a Coptic architect in search of his lost love, Ibn Tulun seizes the city and builds the flourishing new capital of Al-Qata'i and the Mosque of Ibn Tulun. Designed by Said to blend Greek, Roman, Coptic, and Arab elements, the mosque is still the largest in Egypt, symbolizing both Tulun's power and his vision of cultural harmony. Although a successful ruler, Ibn Tulun's secretary, wife, and arch-enemy's stories reveal a different side of the man. While Ibn Tulun focuses on building an independent Egypt, a family betrayal speeds his death. Soon the Abbasid caliphate threatens to regain control of Al-Qata'i, and Tulun's daughter Aisha must not only fight for her life but preserve what she can of the city—especially the treasured mosque. With help from Said and an Arab tribe living outside Fustat, she takes a stand against the Abbasids.

This gripping novel, framed by the rediscovery of the Mosque of Ibn Tulun in the early twentieth century, follows the deeply intertwined histories of Al-Qata'i' and the Egyptian people. A vibrant portrait of early Egyptian life, Al-Qata'i explores the country's identity and shows how the past can illuminate the future.

Reem Bassiouney is the author of nine novels, including *Professor Hanaa*, recipient of the 2009 Sawiris Foundation Literary Prize for Young Writers and the bestselling *Sons of the People: The Mamluk Trilogy*, which won the 2019-2020 Naguib Mahfouz Award for the best Egyptian novel of the year. Roger Allen has translated fifteen books of Arabic literature into English, including novels by the Nobel Prize-winning author Naguib Mahfouz.

The COVID-19 Intelligence Failure:

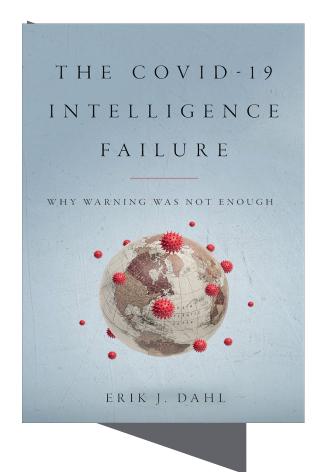

Why Warning Was Not Enough

Erik J. Dahl

Epidemiologists and national security agencies warned for years about the potential for a deadly pandemic, but in the end global surveillance and warning systems were not enough to avert the COVID-19 disaster. In *The COVID-19 Intelligence Failure*, Erik J. Dahl demonstrates that understanding how intelligence warnings work—and how they fail—shows why the years of predictions were not enough.

In the first in-depth analysis of the topic, Dahl examines the roles that both traditional intelligence services, medical intelligence, and surveillance systems play in providing advance warning against public health threats—and how these systems must be improved for the future. For intelligence to effectively mitigate threats, specific, tactical-level warnings must be collected and shared in real time with receptive decision makers who will take appropriate action. In the case of the COVID-19 crisis, Dahl shows how a combination of late and insufficient warnings, political aversion to scientific advice, and decentralized public health systems all exacerbated the pandemic in the United States. However, these pitfalls are not unique to the coronavirus crisis. Dahl draws parallels to other warning failures preceding major catastrophes from Pearl Harbor to 9/11, placing current events in context.

The COVID-19 Intelligence Failure is a wake-up call for the United States and the international community to improve their national security, medical, and public health intelligence systems and capabilities. A global effort will be needed to avert the next disaster.

Erik J. Dahl is an associate professor in the National Security Affairs Department and a faculty member of the Center for Homeland Defense and Security at the US Naval Postgraduate School. He is the author of *Intelligence and Surprise Attack: Failure and Success from Pearl Harbor to 9/11 and Beyond* (Georgetown University Press, 2013).

Russian Cyber Operations:

Coding the Boundaries of Conflict Scott Jasper

Russia has deployed cyber operations to interfere in foreign elections, launch disinformation campaigns, and cripple neighboring states—all while maintaining a thin veneer of deniability and avoiding strikes that cross the line into acts of war. How should a targeted nation respond? In *Russian Cyber Operations*, Scott Jasper dives into the legal and technical maneuvers of Russian cyber strategies, proposing that nations develop solutions for resilience to withstand future attacks.

Jasper examines the place of cyber operations within Russia's asymmetric arsenal and its use of hybrid and information warfare, considering examples from French and US presidential elections and the 2017 NotPetya mock ransomware attack, among others. A new preface to the paperback edition puts events since 2020 into context. Jasper shows the international effort to counter these operations through sanctions and indictments has done little to alter Moscow's behavior. Jasper instead proposes that nations use data correlation technologies in an integrated security platform to establish a more resilient defense.

Russian Cyber Operations provides a critical framework for determining whether Russian cyber campaigns and incidents rise to the level of armed conflict or operate at a lower level as a component of competition. Jasper's work offers the national security community a robust plan of action critical to effectively mount a durable defense against Russian cyber campaigns.

Capt. Scott Jasper, US Navy (Ret.), is a lecturer in the National Security Affairs Department at the US Naval Postgraduate School. He is the author of Strategic Cyber Deterrence: The Active Cyber Defense Option and the editor of Conflict and Cooperation in the Global Commons, Securing Freedom in the Global Commons, and Transforming Defense Capabilities: New Approaches for International Security.

Subcontinental Drift

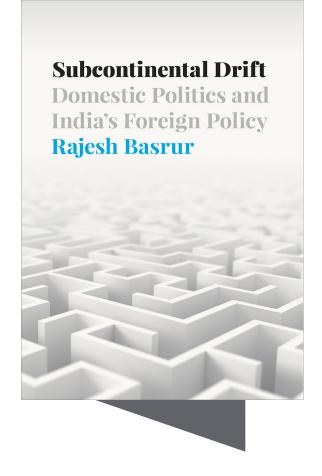

Domestic Politics and India's Foreign Policy

Rajesh Basrur

One of the most important developments in today's changing international system is the emergence of India as a rising power. However, Rajesh Basrur finds that India is held back by serious domestic constraints. *Subcontinental Drift* explains why India's foreign policy is often characterized by multiple hesitations, delays, and diversions that may ultimately hamper its rise.

Basrur analyzes the concept of policy drift through the lens of neoclassical realist theory to reveal why this drift occurs so regularly in Indian foreign policy and how it affects India's quest for major power status. Using four cases—the India-US strategic partnership, India-Sri Lanka relations, India's nuclear strategy, and crossborder terrorism—Basrur identifies two basic explanations for India's indecision on critical issues. The first, involuntary drift, is related to the distribution of domestic material power, while the second, voluntary drift, is produced by a responsibility deficit.

Basrur develops a fresh theoretical basis for understanding the relationship between India's foreign and domestic policies and introduces a series of theoretical refinements to neoclassical realism. Subcontinental Drift also provides advice on how policy makers might lower the costs of policy drift. This innovative analysis is essential to understanding the constraints around India's foreign and domestic security decisions and how they will affect its rise.

Rajesh Basrur is a senior fellow in the South Asia Program at the S. Rajaratnam School of International Studies in the Nanyang Technological University in Singapore and is a research associate with the Contemporary South Asian Studies Program at the Oxford School of Global and Area Studies in the University of Oxford. He is the author (with Kate Sullivan de Estrada) of *Rising India: Status and Power* (Routledge, 2017).

Information in War

Military Innovation, Battle Networks, and the Future of Artificial Intelligence

Benjamin M. Jensen, Christopher Whyte, and Scott Cuomo

Artificial intelligence (AI) will revolutionize the way we live and transform how militaries wage war. This revolution comes with high stakes, as military organizations that innovate and adapt to this AI revolution will gain significant advantages over their rivals. Great powers such as the United States and China are investing in novel sensing, reasoning, and learning technologies that will alter how militaries observe, orient, decide, and act in relation to the enemy and environment—and fundamentally change how we conceptualize the national security enterprise.

Understanding how AI will change the character of warfare and strategic competition requires a deeper understanding of the relationship between information, organizational dynamics, and military power. To assess how militaries may adopt AI, and where they may go wrong, authors Benjamin M. Jensen, Christopher Whyte, and Scott Cuomo analyze past examples of military information technologies, including radar, early computers in air-defense coordination, computerized battle networks, and remotely piloted aerial vehicles. These case studies reveal that the discovery of new technologies does not ensure innovation and demonstrate how militaries can avoid common obstacles to achieve effective adoption. *Information in War* concludes by sketching four hypothetical outcomes of how the US military may use AI by 2040, helping us imagine and prepare for a range of possible futures.

Benjamin M. Jensen is a professor at the Marine Corps University's Command and Staff College, senior fellow at the Center for Strategic and International Studies, a scholar at American University's School of International Service, and a major in the US Army Reserve. Christopher Whyte is an assistant professor at the Wilder School of Government & Public Affairs at Virginia Commonwealth University. Lt. Col. Scott Cuomo (USMC) is a veteran of the wars in Iraq and Afghanistan and served as the Marine Corps representative on the National Security Commission on Artificial Intelligence.

Reinventing the Supply Chain:

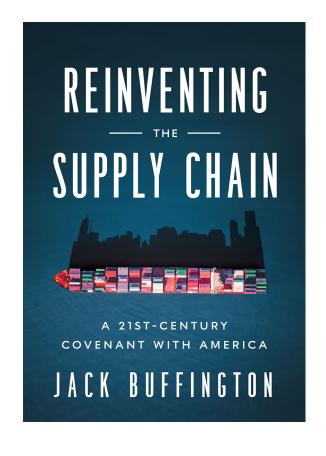

A 21st-Century Covenant with America

Jack Buffington

Few consumers understand the intricacies of the global supply chain system. They show up to the supermarket and the shelves are stocked, or they shop online and the goods arrive on the next day; that is, until they don't. When the COVID-19 pandemic began in March 2020, our supply chains began to fail, and out-of-stock items and delivery delays became the new norm. The pandemic strain did not break the current system of supply chains; it merely exposed weaknesses and fault lines that were decades in the making, having made their presence acutely felt in deindustrialized cities and rural towns throughout the United States.

Reinventing the Supply Chain explores the role of supply chains in the global economy; outlines where the system went wrong and what needs to be done to fix it; and demonstrates how a retooled supply chain can revitalize American communities. Jack Buffington, a supply chain expert, proposes the transformation of the global supply chain system into a community-based value chain, led by the communities and driven by digital platforms for raising capital and blockchain technology.

Buffington's vision for a sustainable value chain of the future is already part of a nationwide conversation. Senior executives have come to view their supply chains as a strategic capability rather than a cost center, and they are investing in them more heavily than ever. Supply chain managers now provide input to most strategic decisions at retailers and manufacturers. Whether or not Buffington's vision can be achieved by a certain date is less important than understanding what we need to do, and Buffington is our guide.

Jack Buffington is the Program Director of Supply Chain Management at the University of Denver and Director of Supply Chain and Sustainability practices at First Key Consulting. He is the author of several books, including *The Recycling Myth* and *Peak Plastic*.

Fixing American Cybersecurity:

Creating a Strategic Public-Private Partnership

Edited by Larry Clinton Foreword by Kiersten Todt

Fixing American Cybersecurity goes beyond books that simply describe cybersecurity technology or law to provide a coherent and comprehensive explanation of why we are making so little progress in addressing the threat, and it lays out a specific path to address the threat in a new, more effective fashion.

The book calls for a new market-based "social contract" between the public and private sectors. Since virtually every aspect of modern life is dependent on these cyber systems, cybersecurity is everybody's issue. It should be required reading for both industry and government leaders, as well as cybersecurity practitioners.

The book is a collaborative effort of the Board of Directors of the Internet Security Alliance. Each author is a recognized expert in cybersecurity typically with substantial frontline responsibility for addressing the most sophisticated cyber attackers. Taken together, these authors bring elite-level cybersecurity expertise into one coherent volume.

Larry Clinton is President and CEO of the Internet Security Alliance (ISA). The National Association of Corporate Directors has twice named Clinton as one of the 100 most influential people in the field of corporate governance. Clinton is the author of numerous publications in the cybersecurity space.

Mao's Army Goes to Sea:

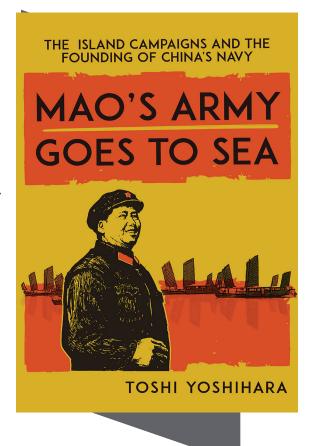

The Island Campaigns and the Founding of China's Navy

Toshi Yoshihara

From 1949 to 1950, the People's Liberation Army (PLA) made crucial decisions to establish a navy and secure China's periphery. The civil war had been fought with a peasant army, yet to capture key offshore islands from the Nationalist rival, Mao Zedong needed to develop maritime capabilities. Mao's Army Goes to Sea is a groundbreaking history of the founding of the Chinese navy and Communist China's earliest island-seizing campaigns.

By providing the definitive account of this little-known yet critical moment in China's naval history, Toshi Yoshihara shows that, contrary to conventional wisdom, the People's Republic of China paid close attention to naval affairs during its earliest years. Chinese leaders possessed vision and independent agency, refashioning the stratagems and tactics honed over decades of revolutionary struggle on land. Despite material shortcomings, a lack of naval training, and some early military disasters, the PLA ultimately scored important victories as it captured offshore islands to secure its position

Drawing extensively from newly available Chinese-language sources, this book reveals how the navy-building process, sea battles, and contested offshore landings had a lasting influence on the PLA. Even today, the institution's identity, strategy, doctrine, and structure are conditioned by these early experiences and myths. Mao's Army Goes to Sea will help US policymakers and scholars place China's recent maritime achievements in proper historical context—and provide insight into how its navy may act in the future.

Toshi Yoshihara is a senior fellow at the Center for Strategic and Budgetary Assessments and an adjunct professor in the Security Studies Program at Georgetown University.

Forbidden:

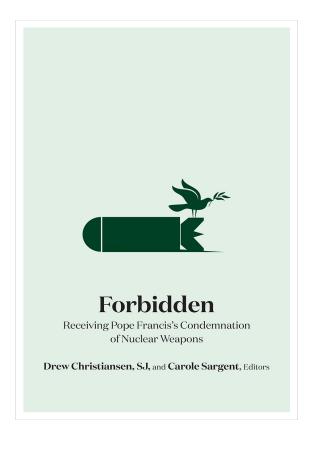

Receiving Pope Francis's Condemnation of Nuclear Weapons

Edited by Drew Christiansen and Carole Sargent

At the 2017 Vatican Conference on Disarmament, Pope Francis became the first pontiff to officially condemn the use and possession of nuclear armaments. The papers of that groundbreaking conference are collected in *A World Free from Nuclear Weapons*. This companion volume continues the conversation. Bringing together essays from moral theologians, defense analysts, scholars of conflict transformation, and experts in nuclear arms control with testimonies from witnesses, *Forbidden* contextualizes the Pope's condemnation and considers what it demands of those most directly engaged with nuclear weapons.

These experts explain how Church teaching on nuclear weapons has evolved from acceptance of deterrence to a condemnation of both the weapons and the systems which rely upon them. To make Pope Francis's teaching "church-wide and parish-deep," these essays call on us to engage with just-war analysis, conscience formation, and moral education, interweaving the essential witness of survivors of nuclear attacks and test explosions.

Forbidden asks us to consider how we can receive and implement the Pope's vision of peace. Chapters from the perspectives of missile personnel and the military chain of command, industrialists and legislators, and citizen activists show how these communities can help in the transition to a nuclear-free world. A key to this transition is public education and the mobilization of lay Catholic movements to raise awareness and affect change.

Drew Christiansen, SJ is Distinguished Professor of Ethics and Human Development in the Walsh School of Foreign Service and senior fellow at the Berkley Center for Religion, Ethics and World Affairs, at Georgetown University. He is coeditor with Carole Sargent of *A World Free from Nuclear Weapons* (Georgetown University Press, 2020). **Carol Sargent** is the author of *Transform Now Plowshares*. She is the founding director of Georgetown University's Office of Scholarly Publications.

Tomorrow's Troubles

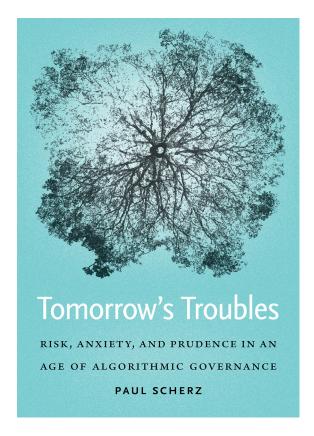

Risk, Anxiety, and Prudence in an Age of Algorithmic Governance

Paul Scherz

Probabilistic predictions of future risk govern much of society. Policymakers and private companies design structures to manage risk by controlling the behavior of citizens and consumers, using new technologies that comb through past data to predict and shape future action. Choosing between possible future paths can cause anxiety as our every decision becomes a calculation to achieve the most optimal outcome.

Tomorrow's Troubles uses virtue ethics to analyze these issues. Over three parts, moral theologian Paul Scherz uses a theological analysis of risk and practical reason to suggest ways to enjoy the benefits of these predictive technologies while constraining their dangerous aspects. Part One shows how risk-based decision theory reorients our relationships to the future through knowledge of possible dangers and foregone opportunities, and how this deceptive hope for total security is presented in politics and business.

Part Two examines how new predictive models use data to influence behavior. While this presents many dangers, Scherz argues that the largest problem is that predictive models do not address reason and free will. Part Three focuses on how we can take a positive Christian approach to risk by examining theological frameworks of responsibility. Instead of dwelling on a future we cannot control, we can use our past experiences and the Christian tradition to focus on discerning God's will in the present. Scherz's thoughtful new framework will help Christians benefit from predictive technologies while recognizing God's role in our lives and our futures.

Paul Scherz is associate professor of moral theology and ethics in the School of Theology and Religious Studies at the Catholic University of America.

Tragic Dilemmas in Christian Ethics

Kate Jackson-Meyer

Moral dilemmas arise when individuals are unable to fulfill their ethical obligations. Tragic dilemmas are moral dilemmas that involve wrongdoing and tragic outcomes. The existence of moral and tragic dilemmas is debated in philosophy and often dismissed in theology based on the notion that there are strategies that completely solve hard ethical situations. Yet cases in war and bioethics offer compelling evidence for the existence of tragic dilemmas.

In *Tragic Dilemmas in Christian Ethics*, Kate Jackson-Meyer introduces a new theological understanding of tragic dilemmas rooted in moral philosophy, contemporary case studies, and psychological literature on moral injury. Jackson-Meyer argues that in tragic dilemmas moral agents choose between conflicting moral obligations rooted in Christian commitments to protect human life and the vulnerable. Personal culpability is mitigated due to constrained situations and society is culpable when tragic dilemmas are a result of structural sin. In response, Jackson-Meyer implores Christian communities to offer individual and communal healing after tragic dilemmas and to acknowledge their own participation in injustice.

Jackson-Meyer expertly explores the thought of Augustine and Aquinas to show the limits of their treatment of hard cases, as well as where their thought can be built on and expanded in relation to tragic dilemmas. These insights are made relevant by numerous applications to case studies throughout the book. Additionally, Jackson-Meyer offers practical strategies that Christian communities can use to provide healing to those who have acted in tragic dilemmas and to transform the unjust structures that often cause these tragedies.

Kate Jackson-Meyer is a member of the faculty at Boston College, where she teaches in the Theology Department and for the Faith, Peace, and Justice minor.

September2022 Paperback, 978-1-64712-267-6 \$49.95 199 pages, Hardcover, 978-1-64712-266-9 \$149.95 6x9 Ebook, 978-1-64712-268-3 \$49.95

ADVANCE PRAISE:

- Recognizes and explores tragic dilemmas, a problem often obscured by approaches to hard cases which ignore the effects of injustices
- Case studies from war and bioethics engage readers in thought-provoking discussions
- Provides practical guidance on using theological, spiritual, and liturgical resources to help Christian communities support those who have experienced tragic dilemmas

TABLE OF CONTENTS:

Introduction

- 1. Philosophical and Theological Problems with Moral and Tragic Dilemmas
- 2. Problems with Augustinian Approaches to Moral and Tragic Dilemmas
- 3. Problems with Thomistic Approaches to Moral and Tragic Dilemmas
- 4. A Proposal for a Christian View of Tragic Dilemmas
- 5. Christian Approaches to Healing after Tragic Dilemmas

Canadian Military Intelligence:

Operations and Evolution from the October Crisis to the War in Afghanistan

David A. Charters

Canadian intelligence has moved from the periphery to become increasingly central to the operations of the Canadian Armed Forces (CAF). Canadian Military Intelligence is the first comprehensive history that examines the impact of tactical, operational, and strategic intelligence on the Canadian military. Drawing upon a wide range of original documents and interviews with participants in specific operations, this book provides an inside perspective on how the evolving Canadian military intelligence enterprise has supported CAF operations.

Part one provides background about the development of Canadian defense policies and military intelligence since the Second World War, describing how the intelligence community adapted to changing concepts, practices, and technologies. Part two analyzes case studies to show how intelligence influenced key military operations. The cases include the October Crisis of 1970, the Oka Crisis, the Gulf War, peacekeeping and enforcement operations in the Balkans, and the war in Afghanistan.

Decades of experience, innovation, and increasingly close cooperation with allies allowed Canada's military intelligence to punch above its weight. Its tactical effectiveness and ability to overcome challenges reshaped the outlook of military commanders, and intelligence emerged to become a central feature of military and defense operations. The conclusion brings readers to the present, discussing the creation of the Canadian Forces Intelligence Command and its implications for future intelligence support. This book will be essential to both intelligence history and military history readers and collections.

CANADIAN MILITARY INTELLIGENCE

OPERATIONS AND EVOLUTION
FROM THE OCTOBER CRISIS TO
THE WAR IN AFGHANISTAN

DAVID A. CHARTERS

David A Charters is a senior fellow of the Milton F. Gregg Centre for the Study of War and Society and a retired professor of military history, both at the University of New Brunswick. He has authored numerous books and articles.

American Defense Reform

Lessons from Failure and Success in Navy History

Dave Oliver and Anand Toprani

Foreword by Adm. Bill Owens, USN (Ret.)

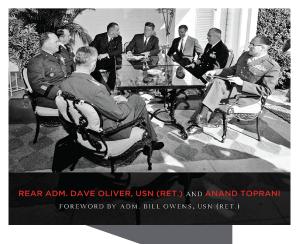

The United States military must be continually reshaped to adapt to evolving technologies, shifting adversaries, and a changing social environment for its personnel. However, introducing reform into the vast Department of Defense and its service branches is notoriously difficult. In *American Defense Reform*, retired admiral and defense executive Dave Oliver and historian Anand Toprani use US naval history as a guide for leading successful change in the Pentagon, showing how close collaboration among civilians and the military can create a path forward.

Part One begins with a historical analysis of the Navy during four key periods of disruptive transformation. Oliver and Toprani offer insights from historical documents, previously unpublished interviews from four-star admirals, and Oliver's own experiences as a senior naval officer and defense industry executive. Part Two examines the roles of civilian political appointees, Congress, and private industry in influencing defense innovation.

Ultimately, Oliver and Toprani show that change can only come from a collaborative effort between civilians, the military, and industry that leverages each groups' particular strengths for the collective good. The book's final chapters offer practical recommendations to reform national defense to meet the demands of the future.

LESSONS FROM FAILURE AND SUCCESS IN NAVY HISTORY

Rear Adm. Dave Oliver is a former chief of staff of the US Seventh Fleet and former CEO of EADS North America Defense Company, Inc. He is the author of *A Navy Admiral's Bronze Rules: Managing Risk and Leadership* (USNIP, 2021). Anand Toprani is an associate professor in the Department of Strategy & Policy at the US Naval War College. He is the author of *Oil and the Great Powers: Britain and Germany, 1914-1945* (Oxford University Press, 2019), which received the 2020 Richard W. Leopold Prize from the Organization of American Historians.

America's Path Forward

Conversations with Social Innovators and the Bennefits of Trusting
Those Closet to Problems

Edited by Konstanze Friszchen and Michael Zakaras

The United States is living through a period of polarization and upheaval. We hunger for answers, yet too often turn to the same people and institutions, somehow expecting different outcomes. How can this be?

This book takes a different angle. It features award-winning social innovators from all walks of life with decades of experience working in and with their communities across America. In twenty-two deep, idea-packed conversations, they share their analysis, practical insights, and policy recommendations—on how to gain common ground, get the country unstuck, and increase prosperity and wellbeing for all.

What their narratives have in common is that they see community members not as weak or dependent, but as creative, resourceful, and strong, with unique expertise and lived experience of the problems at hand, whose changemaking energy can be tapped to build a better future for all of us.

Konstanze Firschen is a member of the global leadership group of Ashoka. Frischen is a social anthropologist by background and has co-led Ashoka's emergence and growth in Western Europe. She has been a writer for CNN and a writer/editor for Frankfurter Allgemeine Zeitung. Michael Zakaras is the director of Ashoka US. He is also co-founder of Ashoka's "All America" initiative which focuses on pushing the boundaries of social entrepreneurship beyond the traditional coastal circles. He has a particular interest in food and agriculture policy, criminal justice reform, and more democratic

"My Faith in the Constitution Is Whole"

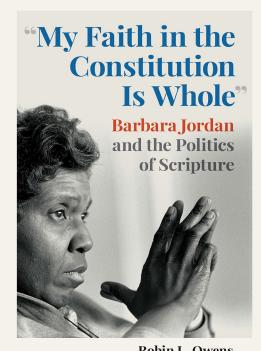

Barbara Jordan and the Politics of Scripture

Robin L. Owens

US Congresswoman Barbara Jordan is known as an interpreter and defender of the Constitution, particularly through her landmark speech during Richard Nixon's impeachment hearings. Before she developed faith in the Constitution, Jordan had faith in Christianity. In "My Faith in the Constitution is Whole": Barbara Jordan and the Politics of Scripture author Robin L. Owens shows how Jordan turned her religious faith and her faith in the Constitution into a powerful civil religious expression of her social activism.

To provide a historical backdrop for Jordan's rhetorical strategies, Owens begins by examining the lives and work of the nineteenthcentury Black female orator-activists Maria W. Stewart and Anna Julia Cooper. Stewart and Cooper fought for emancipation and women's rights by "scripturalizing," or using religious scriptures to engage in political debate. Owens then demonstrates how Jordan built upon this tradition by treating the Constitution as an American "scripture" to advocate for racial justice and gender equality. Case studies of key speeches throughout Jordan's career show how she quoted the Constitution and other founding documents as sacred texts, used them as sociolinguistic resources, and employed a discursive rhetorical strategy of indirection known as "signifying on scriptures."

Jordan's particular use of the Constitution—deeply connected with her background and religious, racial, and gender identity represents the agency and power reflected in her speeches. Jordan's strategies also illustrate a broader phenomenon of scripturalization outside of institutional religion and its rhetorical and interpretive possibilities.

Robin L. Owens

Robin L. Owens is an associate professor of religious studies at Mount Saint Mary's University in Los Angeles. Her research interests focus on intersections between religion and culture, specifically the role and function of religion in identity formation and power negotiation.
