Subversion
The Strategic Weaponization of Narratives
Andreas Krieg

“Subversion is now the norm, not the exception, in our information age. In this rich and complex work the author ranges widely from the philosophical understanding of ‘truth’ to the activities of troll factories in Russia. Now that the Great Power conflict is very much alive, Krieg’s insights are particularly timely.”
—Christopher Coker, director, LSE IDEAS

Now more than ever, communities across the world are integrated into a complex, global information ecosystem that shapes the nature of social, political, and economic life. The ripple effects of actors trying to manipulate or disrupt this information ecosystem are far more severe than the primary effects that are merely being felt in the information space. In fact, the weaponisation of narratives has already shown its potential to transform the character of conflict in the twenty-first century.

Subversion examines how malicious state and nonstate actors take advantage of the information space to sow political chaos. Andreas Krieg reveals how the coordinated use of weaponised narratives can achieve strategic-level effects through a six-stage process. Preying on vulnerable states and communities to find the fault lines within societies, these campaigns begin in the information space with an ultimate goal of producing tangible results (such as changes to policy or voting behaviour, or spurring political violence). Krieg closely examines recent subversion campaigns by two states in particular, focusing on Russia’s interference in Western public discourse and the United Arab Emirates demonisation of the Muslim Brotherhood as a terrorist organisation.

Subversion will provide scholars and policymakers with a comprehensive understanding of one of the most urgent threats in international politics along with recommendations on how vulnerable communities can become more resilient.

**HUMAN RIGHTS**

**Sex Trafficking and Human Rights**

The Status of Women and State Responses
Heather Smith-Cannoy, Patricia C. Rodda, and Charles Anthony Smith

Timely insights into a persistent global challenge—Todd Landman, Professor of political science, pro-vice-chancellor of the Faculty of Social Sciences, and executive director of the Rights Lab, University of Nottingham

Human trafficking for the sex trade is a form of modern-day slavery that ensnares thousands of victims each year, disproportionately affecting women and girls. While the international community has developed an impressive edifice of human rights law, these laws are not equally recognized or enforced by all countries. Sex Trafficking and Human Rights demonstrates that state responsiveness to human trafficking is shaped by the political, social, cultural, and economic rights afforded to women in that state.

While combating human trafficking is a multiscalar problem with a host of confounding variables, this book shows that a common theme in the effectiveness of state response is the degree to which women and girls are perceived as, and actually are, full citizens.

This important book is both a call to understanding and a call to action: if the international community and state governments are to responsibly and effectively combat human trafficking, they must center the equality of women in national policy.

**INTELLIGENCE & ESPIONAGE**

**Nothing Is Beyond Our Reach**

America’s Techno-Spy Empire
Kristie Macrakis

Ever since the earliest days of the Cold War, American intelligence agencies have launched spies in the sky, implanted spies in the ether, and even tried to control spies’ minds by chemical means. But these weren’t human spies. Instead, the United States expanded its reach around the globe through techno-spies.

Nothing Is Beyond Our Reach investigates how America’s technophiles inadvertently created a global espionage empire: one based on technology, not land. Author Kristie Macrakis shows how in the process of staking out the globe through technology, US intelligence created the ability to collect a massive amount of data. But did it help? Macrakis guides the reader through the history of the techno-spy empire beginning in the 1950s. In an age of ubiquitous technology, Nothing Is Beyond Our Reach exposes the perils of relying too much on technology while demonstrating how the US carried on the tradition of British imperial espionage.

**Canadian Military Intelligence**

Operations and Evolution from the October Crisis to the War in Afghanistan
David A. Charters

Canadian Military Intelligence is the first comprehensive history that examines the impact of tactical, operational, and strategic intelligence on the Canadian military. Charters shows how intelligence influenced key military operations, from domestic internal security to peacekeeping efforts to high-intensity air campaigns. He describes how decades of experience, innovation, and increasingly close cooperation with its Five Eyes and NATO allies allowed Canada’s military intelligence to punch above its weight. Its tactical effectiveness and ability to overcome challenges reshaped the outlook of military commanders, and intelligence to become a central feature of military and defence operations.

**Strategic Warning Intelligence**

History, Challenges, and Prospects
John A. Gentry and Joseph S. Gordon

Strategic Warning Intelligence updates our understanding of strategic warning intelligence analysis for the twenty-first century. Gentry and Gordon outline the capabilities of analytic methods, explain why strategic warning analysis is so hard, and discuss the special challenges strategic warning encounters from senior decision-makers. They also compare how strategic warning functions in other countries, evaluate why the United States has in recent years emphasised current intelligence instead of strategic warning, and recommend warning-related structural and procedural improvements.

**Transforming US Intelligence for Irregular War**

Task Force 714 in Iraq
Richard H. Shultz Jr.

Foreword by Gen. Joseph L. Votel, US Army (Ret.), former commander of Central Command and Special Operations Command

InTransforming US Intelligence for Irregular War, Richard H. Shultz Jr. provides a broad discussion of the role of intelligence in combating nonstate militaries and provides innovation during the Iraq War, showing how the defence and intelligence communities can adapt to new and evolving foes. He also reveals how Task Force 714 altered its methods and practices of intelligence collection, intelligence analysis, and covert paramilitary operations to suppress AQI’s growing insurgency and, ultimately, destroy its networked infrastructure. By examining its innovations, Shultz makes a compelling case for intelligence leading the way in future campaigns against nonstate armed groups.

**Researching National Security Intelligence**

Multidisciplinary Approaches
Stephen Cothillhart, Michael Landon-Murray, and Damien Van Puymbroeck, Editors

Researchers in the rapidly growing field of intelligence studies face unique and difficult challenges ranging from finding and accessing data on covert activities, to sorting through the politics of intelligence successes and failures, to understanding complex socio-organisational or psychological phenomena.

In Researching National Security Intelligence, contributors survey the state of the field and demonstrate how a multidisciplinary approach helps to generate high-quality, policy-relevant research. Following this approach, the volume provides a conceptual, empirical, and methodological toolkit for scholars and students informed by many disciplines: history, political science, public administration, psychology, communications, and journalism.

**Intelligence in the National Security Enterprise**

An Introduction
Roger Z. George

This textbook introduces students to the critical role of the US intelligence community within the wider national security decision-making and political process. Intelligence in the National Security Enterprise defines what intelligence is and what intelligence agencies do, but the emphasis is on showing how intelligence serves the policymaker.

The book includes useful features for students and instructors such as excerpts and links to primary-source documents, suggestions for further reading, and a glossary.

The COVID-19 Intelligence Failure
Why Warning Was Not Enough
Erik J. Dahl

Epidemiologists and national security agencies warned for years about the potential for a deadly pandemic, but in the end global surveillance and warning systems were not enough to avert the COVID-19 disaster.

In The COVID-19 Intelligence Failure, Erik J. Dahl demonstrates that understanding how intelligence warnings work—and how they fail—shows why the years of predictions were not enough. In the first in-depth analysis of the topic, Dahl examines the roles that both traditional intelligence services and medical intelligence and surveillance systems play in providing advance warning against public health threats—and how these systems must be improved for the future.

Dahl shows how a combination of late and insufficient warnings about COVID-19, the Trump administration’s political aversion to scientific advice, and decentralised public health systems all exacerbated the pandemic in the United States.

Deter, Disrupt, or Deceive
Assessing Cyber Conflict as an Intelligence Contest
Robert Chesney and Max Smeets, Editors
Foreword by Amy Zegart

The idea of “cyber war” has played a dominant role in both academic and popular discourse concerning the nature of statecraft in the cyber domain. However, this lens of war and its expectations for death and destruction may distort rather than help clarify the nature of cyber competition and conflict. Are cyber activities more like an intelligence contest, where both states and nonstate actors grapple for information advantage below the threshold of war? Deter, Disrupt, or Deceive argues that reframing cyber competition as an intelligence contest will improve our ability to analyse and strategise about cyber events and policy. Contributors to this volume examine this intelligence concept across several areas of cyber security policy and in different national contexts.

Cyber Wargaming
Research and Education for Security in a Dangerous Digital World
Frank L. Smith III, Nina A. Kollars, and Benjamin H. Schechter, Editors

Government, industry, and academia need better tools to explore threats, opportunities, and human interactions with cyberspace. Cyber wargaming is a powerful approach for solving interactive, complex problems that involve cyberspace in a variety of settings. Cyber Wargaming is the first look to provide both the theory and practical examples to successfully build, play, and learn from these group exercises.

The contributors to this book explain what cyber wargames are, how they work, and why they offer insight into real world problems that other methods cannot match. The lessons learned are not merely artifacts of these games—they shed light on how people interpret and interact with cyberspace in real life. Cyber Wargaming will be a vital resource to those interested in security studies and wargame design in academia, the military, and the private sector.

Fixing American Cybersecurity
Creating a Strategic Public-Private Partnership
Larry Clinton, Editor
Foreword by Kiersten Todt

A collaborative effort of the Board of Directors of the Internet Security Alliance, Fixing American Cybersecurity analyses why the US approach to cybersecurity has been inadequate and ineffective for decades and shows how it must be transformed to counter the heightened systemic risks that the nation faces today. It then explains in detail the cybersecurity strategies that should be pursued by each major sector of the American economy: health, defence, financial services, utilities and energy, retail, telecommunications, and information technology.

Cybersecurity vulnerabilities in the United States are extensive, affecting everything from national security and democratic elections to critical infrastructure and economy. In the past decade, the number of cyberattacks against American targets has increased exponentially, and their impact has been more costly than ever before.

The New Age of Naval Power in the Indo-Pacific
Strategy, Order, and Regional Security
Catherine L. Grant, Alessio Patalano, and James A. Russell, Editors
Foreword by Ann E. Rondeau

The New Age of Naval Power in the Indo-Pacific provides an original framework in which five “factors of influence” explain how and why naval power matters in this pivotal part of the world. These five factors draw upon a longstanding influence of naval power on regional dynamics and impact the extent to which different states in the region use naval power: the capacity to exert control over sea-lanes, the capacity to deploy a nuclear deterrent at sea, the capacity to implement the law of the sea in an advantageous way, the ability to control maritime resources, and the capacity for technological innovation. The New Age of Naval Power in the Indo-Pacific offers guidance for navigating the complexity of maritime security and regional affairs.

American Defense Reform
Lessons from Failure and Success in Navy History
Bruce A. Oliver, USN (Ret.); and Anand Toprani
Foreword by Adm. Bill Owens, USN (Ret.)

American Defense Reform provides a historical analysis of the Navy during four key periods of disruptive transformation: the 1940s Revolt of the Admirals, the McNamara Revolution in systems analysis, the fallout from the Vietnam War, and the end of the Cold War.

Oliver and Toprani show that Congress alone cannot effectively create change and reveal barriers to applying the experience of the private sector to the public sector.

Oil, the State, and War
The Foreign Policies of Petrosates
Emma Ashford

Oil, the State, and War explores the many potential links between domestic oil production and foreign policy behaviour and how oil production influences global politics.

Experts have too often treated oil-rich states as passive objects, subject to the energy security needs of Western importing states. Instead, this book highlights the agency and power enjoyed by petrostates.

Nuclear Command, Control, and Communications
A Primer on US Systems and Future Challenges
James J. Wirtz and Jeffrey A. Larsen, Editors
Foreword by Rebecca K. C. Hersman

Concerns about the security of nuclear command, control, and communications (C3I) systems are not new, but they are becoming more urgent. While modernisation is crucial to the future success of NCI systems, the transition from analogue to digital technologies has the potential to introduce vulnerabilities and unintended consequences.

This book explores the current system, its vital role in ensuring effective deterrence, and the need to modernise the United States’ Cold War-era system of systems.

Arms Control for the Third Nuclear Age Between Disarmament and Armageddon
David A. Cooper

The United States faces a new era of nuclear arms racing for which it is conceptually unprepared. Great power nuclear competition is seemingly returning with a vengeance as the post–Cold War international order morphs into something more uncertain, complicated, and dangerous. In this unstable third nuclear age, legacy non-proliferation and disarmament instruments designed for outmoded conditions are ill-equipped to tame the complex dynamics of a multi-polar nuclear arms race centred on China, Russia, and the United States. David A. Cooper proposes relearning, reviving, and adapting classic arms control theory and negotiating practices to steer the world away from threatening and destabilising nuclear arms races.

Geospatial Intelligence Origins and Evolution
Robert M. Clark

Although geospatial intelligence is a term of recent origin, its underpinnings have a long and interesting history. Geospatial Intelligence: Origins and Evolution shows how the current age of geospatial knowledge evolved from its ancient origins to become ubiquitous in daily life across the globe. Within that framework, the book weaves a tapestry of stories about the people, events, ideas, and technologies that affected the trajectory of what has become known as GEOINT. Geospatial Intelligence tells the story of how the current age of geospatial knowledge evolved from its ancient origins to become ubiquitous in daily life across the globe.

Diplomacy and the Future of World Order
Chester A. Crocker, Fen Osler Hampson, and Pamela Aall, Editors

Diplomacy in pursuit of peace and security faces severe challenges not seen in decades. In Diplomacy and the Future of World Order, an international group of experts confronts these challenges to peace and conflict diplomacy—defined as the effort to manage others' conflicts, cope with great power competition, and deal with threats to the state system itself. In doing so, they consider three potential scenarios for world order. These three scenarios are then evaluated through the prism of regional perspectives from around the world.

From Quills to Tweets How America Communicates about War and Revolution
Andrea J. Drew, Marc A. Genest, and S. C. M. Paine, Editors

While today’s presidential tweets may seem a light-year apart from the scratch of quill pens during the era of the American Revolution, the importance of political communication is eternal. The contributing authors explore the roles that political narratives, media coverage, and evolving communication technologies have played in precipitating, shaping, and concluding or prolonging wars and revolutions throughout US history.

Military Strategy, Joint Operations, and Airpower
2nd edition
An Introduction
Ryan Burke, Michael Fowler, and Jahara Matisek, Editors

Military Strategy, Joint Operations, and Airpower introduces contemporary strategy at the operational level of war, particularly as it relates to airpower. Developed as foundational reading for all US Air Force Academy cadets, Air Force ROTC students, and Officer Training School candidates, this intermediate textbook is designed to close the gap between military theory and practice.

Cold Rivals The New Era of US-China Strategic Competition
Evan S. Medeiros, Editor

The US-China relationship is now defined by “strategic competition.” In Cold Rivals, a distinguished group of scholars from the United States and China examine the reasons for this deterioration and its implications for world politics. The book explores not only the historical roots and contemporary foreign policy aspects of this era, but also looks at the economic, military, and technological arenas of US-China strategic competition. In doing so, this volume highlights important differences in US and Chinese perspectives. A final section of the volume explores future scenarios for this relationship from a variety of perspectives, all coming to a sobering conclusion.

This policy-relevant book provides a comprehensive overview of US-China strategic competition and reinvigorates thinking about how to avoid reaching a crisis point.

Other People’s Wars The US Military and the Challenge of Learning from Foreign Conflicts
Brent L. Sterling

Preparing for the next war at an unknown date against an undetermined opponent is a difficult undertaking with extremely high stakes. Even the most detailed exercises and wargames do not truly simulate combat and the fog of war. Through a series of in-depth case studies of the US Army, Navy, and Air Force, Brent L. Sterling creates a better understanding of the dynamics of learning from “other people’s wars.”

America’s Entangling Alliances 1778 to the Present
Jason W. Davidson

Since the Revolutionary War, the United States has entered into dozens of alliances with international powers to protect its assets and advance its security interests. America’s Entangling Alliances offers a corrective to long-held assumptions about US foreign policy and is relevant to current public and academic debates about the costs and benefits of America’s alliances. By documenting thirty-four alliances Davidson finds that the US demand for allies is best explained by the evolution of US power. He examines these alliances to shed light on their nature and what they reveal about the evolution of American power.

Russian Cyber Operations
Scott Jasper

Foreword by Gen. Keith Alexander, US Army Ret., former commander of Cyber Command and former director of the National Security Agency

Russian Cyber Operations provides a critical framework for determining whether Russian cyber campaigns and incidents rise to the level of armed conflict or operate at a lower level as a component of competition. Jasper shows that the international effort to counter these operations through sanctions and indictments has done little to alter Moscow’s behaviour. Jasper instead proposes that nations use data correlation technologies in an integrated security platform to establish a more resilient defence.

Subcontinental Drift
Domestic Politics and India’s Foreign Policy
Rajesh Basrur

Subcontinental Drift explains why India’s foreign policy is often characterised by multiple hesitations, delays, and diversions that may ultimately hamper its rise. Basrur analyses the concept of policy drift through the lens of neoclassical realism theory. Using four cases—the India–US strategic partnership, India–Sri Lanka relations, India’s nuclear strategy, and cross border terrorism—Basrur identifies two basic explanations for India’s indecision on critical issues. The first, involuntary drift, is related to the distribution of domestic material power, while the second, voluntary drift, is produced by a responsibility deficit. Subcontinental Drift also provides advice on how policy makers might lower the costs of policy drift.

This innovative analysis is essential to understanding the constraints around India’s foreign and domestic security decisions and how they will affect its rise. March 2023 : 268 pages : 4 tables : 978-1-64712-285-0 : Paperback £37.50 : 978-1-64712-284-3 : Hardback £113.00

Mao’s Army Goes to Sea
The Island Campaigns and the Founding of China’s Navy
Toshi Yoshihara

From 1949 to 1950, the People’s Liberation Army (PLA) made crucial decisions to establish a navy and secure China’s periphery. The civil war had been fought with a peasant army, yet in order to capture key offshore islands from the Nationalist rival, Mao Zedong needed to develop maritime capabilities. Mao’s vision of China as a global maritime power remains relevant today. This book is a groundbreaking history of the founding of the Chinese navy and Communist China’s earliest island-seizing campaigns.

Mao’s Army Goes to Sea will help policymakers and scholars place China’s recent maritime achievements in proper historical context—and provide insight into how its navy may act in the future. March 2023 : 173 pages : 6 maps

China’s Strategic Arsenal
Worldview, Doctrine, and Systems
James M. Smith and Paul J. Bolt, Editors

China’s strategic capabilities and doctrine have historically differed from the United States’ and Russia’s. China has continued to modernise and expand its arsenal despite its policy of no first use, while the United States and Russia have decreased deployed weapons stocks. This volume brings together an international group of distinguished scholars to provide a fresh assessment of China’s strategic military capabilities, doctrines, and political perceptions in light of rapidly advancing technologies, an expanding and modernising nuclear arsenal, and an increased great-power competition with the United States. China’s Strategic Arsenal provides a current understanding of these issues as we strive for a stable strategic future with China.

Japanese Foreign Intelligence and Grand Strategy
From the Cold War to the Abe Era
Brad Williams

Japanese Foreign Intelligence and Grand Strategy probes the unique makeup of Japanese foreign intelligence institutions, practices, and capabilities across the economic, political, and military domains and shows how they have changed over time. Williams begins by exploring how Japan’s experiences of the Second World War and its new role as a major US ally influenced its adoption of bilateralism, developmentalism, technonoationalism, and anti-militarism as key norms. As Japan re-evaluates the size, shape, and purpose of its intelligence community, and the role of the old and new in guiding its naval future, this book provides a stimulating conversation about Japan’s future.

Pakistan’s Political Parties
Surviving between Dictatorship and Democracy
Mariam Mufti, Sahan Sharifat, and Niloufer Siddiqui, Editors

Pakistan’s Political Parties is a one-of-a-kind resource for diplomats, policymakers, journalists, and scholars searching for a comprehensive overview of Pakistan’s party system and its unlikely survival against an interventionist military, with insights that extend far beyond the region. It examines how the civilian side of the state’s current regime has survived the transition to democracy, providing insight into the evolution of political parties in Pakistan and their role in developing democracies in general.

Finding Soldiers of Peace
Three Dilemmas for UN Peacekeeping Missions
Gary Uzonyi

A data-rich exploration of the UN response to humanitarian crises, Finding Soldiers of Peace shows how policymakers and practitioners can better strategise the execution of UN peacekeeping missions across diverse, and even contentious, stakeholders. Conventional wisdom holds that member states primarily engage in peacekeeping for payment or humanitarian reasons. Uzonyi proves otherwise, helping scholars and practitioners more accurately predict which member states are most likely to send support, where states may send assistance, when they might become involved, the size of their contribution, and their timetable for leaving.

International Institutions and Power Politics
Bridging the Divide
Anders Wivel and T.V. Paul, Editors

This book moves scholarly debates beyond the old question of whether or not international institutions matter in order to examine how they matter, even in a world of power politics. Power politics and international institutions are often studied as two separate domains, but this is in need of rethinking because today most states strategically use institutions to further their interests. International Institutions and Power Politics updates our understanding of how institutions are viewed among the major theoretical paradigms in international relations, and they seek to bridge the divides.

Academic inspection copy service:
Assess our books for relevance to your own teaching. Email opp@oppuk.co.uk with the details of the book you require, your name, institution address, course name and student numbers.

*Academic inspection copy service terms and conditions: a book is sent out free of charge as a commercial sample on 30 days’ approval, you may have to pay customs or VAT charges and a handling fee in the receiving country before you can claim the parcel. These charges will depend on the country being sent to, and our supply is on this basis only. You will be emailed a questionnaire during the 30 days’ approval. At the end of that period, the book should be paid for, returned in mint condition, or adopted for a course with more than 12 students and the completed questionnaire returned.

Institution Building in Weak States
The Primacy of Local Politics
Andrew Radin

Institution Building in Weak States introduces a domestic opposition theory that better explains why institution building fails and what is required to make it work. In contrast to the common strategy of foreign interveners, Radin shows how pursuing incremental change that accommodates local political interests is more likely to produce effective, accountable, and law-abiding institutions. With actionable recommendations for smarter policy, the book offers an important corrective for scholars and practitioners of post-conflict missions, international development, peacebuilding, and security cooperation.

2020 : 280 pages : 5 figures : 22 tables

Foreign Policy Careers for PhDs
A Practical Guide to a World of Possibilities
James Goldgeier and Tamara Cofman Wittes

Whether out of choice or necessity, many people with doctorates pursue careers outside of the academic world. Foreign Policy Careers for PhDs provides a wealth of information, advice, and encouragement to PhDs who are considering a career in foreign policy. James Goldgeier and Tamara Cofman Wittes draw on their own experiences and present inspiring interviews with over two dozen practitioners who successfully made the transition to policy work.

Foreign Policy Careers for PhDs reveals the wide array of public, non-profit, and private sector organisations that hire PhDs. This book serves as a compass for job seekers as they navigate the policy community, think about the opportunities that would be right for them, and present themselves as attractive candidates.
